---

## Summary

AI/ML Research Engineer specializing in large language models, multi-agent systems, autonomous orchestration, reasoning architectures, and inference optimization. Experienced in designing production-grade AI systems, reducing infrastructure costs at scale, and developing novel reasoning frameworks for autonomous agents and multimodal intelligence.

## Experience

### AI/ML Engineer — Swarms Corporation

Remote | Aug 2025 – Jan 2026

- Reduced large-scale API and inference expenses by 89% through routing optimization, orchestration redesign, and infrastructure-level efficiency improvements.
- Increased multi-agent workflow execution speed by 118× while reducing operational cost to 21% of the original baseline.
- Designed and implemented novel reasoning architectures and orchestration methods for multi-agent systems (MAS).
- Implemented and adapted cutting-edge arXiv research papers into production-ready systems and internal tooling.

## Projects

### CR-CA (Causal Reasoning – Counterfactual Analysis)

Research framework focused on causal inference, counterfactual analysis, autonomous reasoning, and scalable orchestration for advanced AI systems.

### Stable Cognition

Experimental reasoning architecture focused on scalable long-context reasoning and lightweight expandable reasoning models.

### Self-AIXI

Experimental AIXI-inspired framework exploring self-prediction-driven learning, world modeling, and AGI-oriented architectures.

### swarms-ViT5

Vision-language experimentation framework focused on multimodal reasoning and transformer optimization.

## Education

### Vilnius “Vytautas” Gymnasium

Secondary Education Completed

### Vilnius Gediminas Technical University (VGTU)

Currently Studying

## Technical Skills

**Languages:** Python, Rust, Go, C++, JavaScript/TypeScript, SQL

**ML/AI:** PyTorch, LLMs, Multi-Agent Systems, Autonomous Agents, Inference Optimization, Distributed AI Systems, Multimodal AI

**Infrastructure:** FastAPI, Distributed Systems, API Design, Inference Infrastructure, Linux Systems, Performance Optimization

**Research Areas:** Causal Reasoning, Counterfactual Analysis, Agent Orchestration, World Models, AGI Systems

## Achievements

- 387 merged pull requests across open-source and engineering projects.
- Developed multiple original AI reasoning and orchestration architectures.
- Built and deployed autonomous multi-agent and inference systems in production-oriented environments.
